PROFESSIONAL SUMMARY

Curious and driven engineering student with a strong interest in emerging technologies, software development, and AI-driven systems. Experienced in building projects across generative AI, real-time applications, system security, and networking, with a passion for exploring new technologies and transforming ideas into practical solutions. Combines strong academic performance with hands-on development experience and a commitment to continuous learning.

EDUCATION

BMS Institute of Technology & Management

Bachelor of Engineering in Electronics & Telecommunication Engineering, CGPA: 9.24

Bengaluru, India

2023 – 2027

Aragami PU College

Class 12 Science, Percentage: 89%

Bengaluru, India

2022 – 2023

PROJECTS

Nutrino: GenAI-Powered Nutrition Assistant | *Google Antigravity, Google Gemini API*

- Developed a multimodal GenAI web application using Google Antigravity, an agent-first IDE.
- Integrated Google Gemini APIs via Server Actions to process unstructured data, enabling automated food logging through image analysis and natural language parsing.
- Engineered and tested contextual prompts conditioned on user metrics, regional availability, and allergies to generate accurate, explainable meal suggestions.

Real-Time AI Interview Platform | *Python, WebSockets, PDFKit*

- Developed a real-time AI interview platform supporting voice-based interactions and automated evaluation.
- Engineered backend services to collect, process, and analyze conversational interview data.
- Automated PDF report generation, converting interview metrics into structured downloadable feedback reports.

QNX Deterministic Security Monitor | *C, QNX RTOS, Microkernel Architecture, IPC*

- Designed a split-architecture security solution on a QNX Microkernel using strictly isolated C programs to mitigate hardware side-channel attacks.
- Developed a zero-overhead Mitigation Engine (Priority 63) triggered by native IPCs to instantly preempt and freeze compromised processes mid-instruction, preventing data exfiltration.

Secure Small Office Network Simulation | *Cisco Packet Tracer, VLANs, Routing*

- Designed and simulated a secure multi-department office network with VLAN-based segmentation, isolating Management, Sales, Engineering, and Guest traffic to enforce structured network access policies.
- Configured inter-VLAN routing, DHCP-based automatic IP allocation, and access control policies for segmented network communication.

EXPERIENCE & EXTRACURRICULAR

Freelance Web Developer | *Independent*

- Designed and deployed commercial websites (bhismasaero.in, pucnotes-solutions.com, isai-tonic.com) using CMS platforms like WordPress and Wix.

AI Model Evaluator | *Outlier AI*

- Contributed 330+ hours of RLHF and SFT tasks to train enterprise LLMs, evaluating model outputs for factual accuracy and logical consistency.
- Performed quality evaluation of AI-generated outputs across Mathematics and multilingual domains.

TECHNICAL SKILLS

Programming Languages: Python, C, JavaScript, SQL

Tools & Software: VS Code, Cursor, Antigravity, PostgreSQL, Git, Wix, WordPress, WebSockets

Networking: Cisco Packet Tracer, RTOS, Linux
