

Embedded Systems (Intern)

Location: Bengaluru, India

Type: Internship (Full time on-site)

About ULOOK

ULOOK is building the future of RF intelligence. Backed by InfoEdge Ventures and GrowX, we are developing autonomous sensing systems that track and understand RF signals across land, sea, air, and space. Our founders have worked on NASA supported missions and global satellite programs, and we are now building India's next leap in space based situational awareness. This is deep tech, high stakes engineering built in Bengaluru.

Role Overview

We are seeking a motivated **Embedded Systems Intern** to support firmware development, hardware bring-up, and system integration for our space-grade platforms. This role is ideal for students or recent graduates who are passionate about embedded systems, enjoy hands-on hardware work, and want to contribute to next-generation aerospace technologies.

You will work closely with senior engineers across firmware, hardware, and RF teams, gaining exposure to real-world challenges in embedded platforms for space applications.

Key Responsibilities

- Assist in developing embedded firmware in C/C++ for microcontrollers and SoCs.
- Support bring-up of evaluation boards and platforms such as **Raspberry Pi** with peripheral interfaces (SPI, I2C, UART, etc.).
- Write Python scripts for hardware automation, testing, and data logging.
- Help debug hardware/software integration issues using lab tools (oscilloscopes, logic analyzers, serial consoles).
- Collaborate with the core team on hardware-in-the-loop experiments and validation testbeds.
- Contribute to maintaining documentation, version control, and test reports.

Desired Skills and Background

- Pursuing or recently completed a **B.E./B.Tech/M.E./M.Tech** in Electronics, Electrical, Computer Engineering, or related fields.
- Familiarity with embedded programming in **C/C++**; basic scripting experience in **Python**.
- Exposure to **Raspberry Pi**, Arduino, or similar prototyping platforms.
- Interest in working with datasheets, schematics, and evaluation boards.
- Enthusiasm to learn lab-based debugging tools (JTAG, oscilloscopes, logic analyzers).
- Strong problem-solving ability and willingness to learn in a fast-paced startup environment.

Bonus Skills (Nice-to-Have)

- Prior coursework or hobby projects in embedded systems, robotics, or aerospace/defense applications.
- Experience with real-time operating systems (FreeRTOS, Zephyr, etc.).
- Exposure to SDRs, sensors, or RF hardware integration.
- Familiarity with Git or other version control tools.

Why Join ULOOK

- Work directly with a globally experienced core team from aerospace and defense domains.
- Gain hands-on exposure to embedded systems for **real-time space intelligence**.
- Opportunity to contribute to projects with strategic impact for India's space capabilities.
- Learn, grow, and build a strong technical foundation in a high-tech startup environment.

Application Process

Send your resume and a short note about your **embedded projects or favorite board you've worked with** to **talent@ulook.space**. Shortlisted candidates will be invited for a technical screening and interview.
